GRADUATE SOFTWARE ENGINEER

IT graduate specializing in full-stack software development with expertise in CI/CD automation, penetration testing, and vulnerability assessments. Recently developed an OSINT reconnaissance tool that streamlines internet-based investigations, consolidating multiple research capabilities into a single platform. Seeking graduate roles to build secure, high-quality applications.

KEY COMPETENCIES

- Team work
- Time management
- Multi-tasking

SELECTED PROJECTS

Stretch Fit Studio — **University Project**
Mobile App

I designed and developed a cross-platform mobile application using Flutter for a fitness studio based in Brisbane, Australia. Implemented structured UI components and navigation flows to support mobile usability and accessibility.

Lahore 2 Delhi — **Volunteer Client**
Mobile App

I developed a mobile application using React Native for a local restaurant in Glebe, NSW. I built menu browsing, item detail, and user interaction screens following mobile UX best practices. Translated restaurant requirements into functional mobile features using component-based architecture.

EDUCATION & CERTIFICATIONS

Bachelor of Information Technology
Majors: Software Development / CyberSecurity
King's Own Institute / Oct 2023 - August 2026

Meta Front End Developer Certification
Coursera / Meta / 2024 - 2024

Cybersecurity for Students Learning Path
